

Role

Energy Manager / Consultant

West Midlands

Our Client is a large Multinational Business Services Provider with an opportunity within their Energy and Environmental Management business. This part of the business is dedicated to reducing the cost and carbon footprint of its own properties and those of its clients, as well as providing advice to their internal and external customers.

We are seeking an Energy Manager or Low Carbon Consultant with property experience, to support the business and take responsibility for delivering energy management services to the organisation's clients.

With properties across the Wales and Midland areas, this is a varied and challenging position. The role will be responsible for identifying poor performing sites, recommending cost effective remedial solutions and managing the database of energy project opportunities. You will also be involved in regular energy performance reviews with client representatives, supporting them in their CRC aspirations, and ensuring the appropriate compliance.

The ideal candidate will be degree qualified in a related discipline with demonstrable experience in identifying and delivering energy and carbon abatement projects. You will also have excellent organisational, time management, IT and communication skills. Willingness to travel extensively is also a requirement and DEC accreditation would be an advantage.

This vacancy is being advertised by Candover Green Ltd. The services advertised by Candover Green Ltd are those of an Employment Agency.
