

# Role

## High Tech Product Manager

Our client is a leading technology and innovation company, renowned for its ability to solve technical problems and provide creative, practical solutions to business issues.

The ongoing success of the organisation has led to the need to recruit a senior product & project manager within the renewable energy & cleantech division. The role will support the growth of the business and execute significant technical project delivery and client management activities that result in continued growth of this important sector of our client's business.

As a senior member of staff, the successful candidate will support the clean technology business in a variety of ways from exhibiting and presenting at key conferences to representing the group at sales meetings. You will use your strong technical expertise and knowledge of the clean technology field to develop relationships with current and future clients by understanding their needs, writing proposals to define the work programmes, holding technical workshops and presenting data.

You will provide a technical point of contact within the company for clients. Significant project management tasks will be a key part of the role, and you will lead multi-disciplinary projects teams and have a demonstrable understanding of systems engineering.

This is an excellent opportunity for an experienced engineer or scientist with the ambition and ability to achieve excellent results in a highly demanding industry and to find novel and radical solutions to new and existing problems under tough commercial, regulatory and time constraints.

To meet the requirements of this role you should have a demonstrable track record in the delivery of technology rich projects, a high level of practical experience within an engineering design environment along with deep technical and theoretical skills. An excellent first degree in an engineering or science related discipline is essential. Knowledge of the broader clean technology area is required; ideally you will have recent experience in the renewable energy or clean technology sectors.
