

Role

Senior Hydrologist

Location: Scotland

I am currently working with a major consultancy based in Scotland that is currently looking to recruit a Senior Hydrologist.

The successful candidate will be responsible for the provision of hydrology support to the EIA, Contaminated Land and Environmental Engineering teams.

You will be responsible for; Completing hydrology reports in relation to Environmental Impact Assessments and other hydrology linked services. Completing private water supply assessments and providing other hydrology support where necessary; Completing ongoing projects such as the delivery of flood risk modelling and mapping to clients, provision of strategic flood risk advice to clients/local authorities, designing flood management measures, completing flood risk assessment and water quality assessments.

The successful candidate will require at least 5 years experience in a similar role and hold a BSc or MSc in Geography or Environmental Science with a further qualification in Hydrology.

This is a great opportunity to join a very busy and successful leading consultancy. The company can offer scope for career development/progression and provide the opportunity to work with multidisciplinary teams.

For further details, please contact Karl Able - kable@candovergreen.com

All applicants must reside in the UK and be eligible to work in the UK.
