

Role

Experienced Wind Farm Developer

Be part of an exciting, growing team

Following two very successful years and building on a strong pipeline of nine consented sites and numerous others pre-consent, this independent UK based renewable energy company is looking to hire a new wind farm developer. The company is a sponsoring member of the BWEA and is highly ranked among independent companies in terms of consented on-shore UK projects.

Senior Project Developer

London location joining a small, close knit development team (~ 9 people)
Competitive salary including pension, health care and bonuses

Suitable candidates will have:

- a degree in planning, environment, construction or engineering and ideally a post graduate qualification in finance, business or an MBA
- at least five years experience of developing wind power projects
- experience taking at least one project through from first landowner engagement through to operations

Key requirements:

- understanding of the technical/planning aspects of wind farm development
- business acumen and ability to navigate/understand contracts/legal structures
- outstanding inter-personal and communication skills – ability to work within a small team and act on own initiative
- formidable tenacity, enthusiasm and creativity

Based in the client's London offices with some travel, primarily throughout UK, you will report directly to the Managing Director.
