

Role

Senior Wind Analyst – Bristol or Glasgow

This specialist wind analysis consultancy focuses on exceptional technical standards and takes a dynamic and innovative approach to all assignments.

The company provides wind analysis services to the wind farm development sector.

We are seeking to an experienced, technically proficient wind analyst, comfortable with both technical work and client interaction.

The successful applicant will:

- Understand the fundamentals of the wind farm development business, in the UK and overseas;
- Have good working and theoretical knowledge of industry standard wind modelling software and methods;
- Have excellent computer literacy skills, including programming;
- Be keen to take the initiative, develop new methods and get things done.

Typical qualifications:

- Good degree in a numerical subject;
- One to five years experience in the wind industry.
