

# Role

## **Power Engineer, UK-North West, £Excellent + Bonus & Benefits.**

Senior Power Engineer required to join a successful independent energy consultancy.

Primarily a desk-based role with some external meetings and site visits. Would suit a power engineer from either project or studies background as the role can be developed around individuals with potential.

Duties to include responding to enquiries, identifying opportunities, preparing proposals, undertaking studies, writing and reviewing reports, managing client relationships and managing small project teams.

Skills and Experience:

- Relevant degree and be at (or approaching) Chartered Engineer status.
- Ability to produce high quality technical reports.
- Project management or project engineering experience.
- Experience of economic analysis and cost-benefit appraisals.
- Knowledge of QA systems and document management
- Good knowledge of UK and international standards and codes.
- Good understanding of loadflow, fault and dynamic calculations.
- Knowledge of IPSA, PSSE or DigSilent and other analysis packages and software languages.

Practical experience of transmission, distribution or generation projects would be highly desirable.

Please email me at [max@candovergreen.com](mailto:max@candovergreen.com) to express your interest explaining your suitability for this position.

I am also recruiting Principal Level Power Engineers for this client.

Only candidates with the right to work/reside in the UK will be considered for this role.
