

Role

Wind Turbine Installation Manager

Our client is an independent renewable energy company that provides wind energy services from pre-construction to operation and maintenance across more than 30 wind farms across Europe. Due to sustained growth they are currently seeking to appoint a Wind Turbine Installation Manager with extensive onshore wind farm installation experience in United Kingdom.

The ideal candidate will have proven track record of installing mechanically turbines, selecting technicians and managing a group of mechanical and electrical engineers. You will also have excellent knowledge of tools used on wind turbine installation and experience of managing documentation of Health and Safety and Quality Control. The post holder will also be required to take responsibility of Cost Control and Budget definition.

The nature of the role will require extensive travelling within UK and abroad.
