

Plant Manager

South East

£Attractive

We are working with a leading recycling company who have the requirement for an experienced, electrical engineering focused plant manager to take responsibility for the recycling process at their site in the South East.

This position will see the successful candidate initially focusing on performance and maintenance of any fixed plant machinery on site with the aim of extending best practice in other bases including the Midlands, responsibility will also include overseeing the team of operatives (who work 24/7), encouraging them and their work to guarantee efficiency and targets and other responsibilities will be expected to be met with this role as it expands.

To be considered you must have previous leadership experience within Recycling or relevant industry; waste, process engineering, aggregates or manufacturing, have maintenance engineering as a foundation to your career and have a solid understanding of large motors, conveyor belts and heavy fixed plants as well as an ability to read drawings and flow charts.

For the full requirements and responsibilities please send a copy of your CV to rebecca@candovergreen.com quoting **Job Ref: RB1882**
