

Senior Air Quality Consultant

North West

£Competitive + benefits package

We are working with a leading multi-disciplinary environmental consultancy who have the requirement for an experienced and passionate air quality consultant who will play a key role in providing high quality consulting advice, both routine as well as pioneering assessment work, whilst implementing innovative approaches and providing a holistic and high quality service to their clients.

The successful candidate will also contribute to and manage the delivery of projects on time and to budget, manage resources within the project delivery and undertake regular project reviews, contribute to business forecasts to provide visibility of workloads, team utilisation and business development activities and support junior team members in the safe delivery of consultancy services and their own professional development, as well as a number of other duties and responsibilities.

In order to be considered for this role you must have a minimum of 5 years air quality consultancy experience, thorough understanding of air quality legislation, policy & guidance, experience of delivery, co-ordination and technical review of air quality assessments, proficiency in dispersion models for industrial and/or transport sources (e.g. ADMS, AERMOD), a degree in a relevant scientific discipline (a Masters level degree is preferable) and you must have a full UK driving license.
