

Electrical HV AP Engineer

London

£Competitive

We are working with a leading energy and services company who now have the requirement for an experienced Electrical HV AP Engineer to join their team based in London and take on responsibility for the operation and maintenance of district heating scheme generation and distribution equipment which consists of large scale boiler, CHP and chilling plant, as well as acting as the authorised person for all high voltage maintenance tasks, carrying out proactive plant monitoring activities to ensure efficient utilisation of plant and equipment, demonstrate the ability to maintain the plant and equipment to agreed specifications and operation, and ensure all jobs are closed down promptly to allow for timely invoicing, as well as a number of other varied duties as required.

The successful candidate will hold HNC/HND in a relevant electrical engineering qualification, experience working with high voltage distribution equipment and they must have a full UK driving licence.
