

Transport Planner

Ireland

£Attractive

Our client, a multi-disciplinary environmental consultancy, have the opportunity for an experienced transport planner to join their team in Ireland and take on responsibility for the delivery of Transport Modelling and Traffic Engineering projects within the practice, assess infrastructure requirements of new developments to support planning applications or to inform local authority development plans, and develop concept design ideas for new or improved transport infrastructure such as junction improvements and pedestrian priority schemes, as well as other duties as required.

The ideal candidate will have a transportation consultancy background and hold a degree in Civil Engineering or Transport Planning, be able to demonstrate a clear understanding and experience within the private and public sector markets within Ireland and Northern Ireland and possess technical knowledge across a range of areas including transport policy, transport modelling and transport assessments.
