

Circular Economy & Sustainability Consultant

London with travel

£-attractive

Do you have a proven background in circular economy and sustainability and an enthusiasm for developing solutions to complex and challenging problems? Do you have experience of environmental consultancy? If so, my client is looking to recruit a high-calibre Principal Consultant to join their Climate, Resilience & Sustainability Team with a particular focus on circular economy. This is an exciting opportunity to make a significant contribution to the continued success and growth of a reputable and successful team and contribute to a wide range of high-profile projects. This role will support the development and implementation of the businesses circular economy strategy, working with a range of clients in industry, local and national government bodies and international institutions. You will have experience in a consultancy environment or other relevant industry with a core specialism in circular economy. You will be able to demonstrate a clear understanding of circular economy policy and strategy and evidence implementation of circular economy, corporate sustainability and/or net zero projects across a number of the businesses core sectors. In order to be considered you will also have; Undergraduate degree in a relevant subject; expected to be in the field of environmental science, policy, waste or carbon management or other sustainability-related subject; Professional affiliation with or membership of appropriate body (e.g. IEMA, CIWM, IET); Postgraduate degree in a relevant subject; expected to be in the field of environmental science, policy, waste or carbon management, economics, engineering or other sustainability-related subject; Chartered status (e.g. CEnv, MCIWM or equivalent); UK driving licence. Working as part of a team you will be required in order to provide innovative solutions for clients but they expect that you will be able to evidence leadership in your field, be self-starting and take the initiative to make effective decisions. You will join an enthusiastic and supportive team and will experience a challenging and fulfilling working environment. There are significant opportunities for ongoing and structured career development within the Climate, Resilience & Sustainability field and across the wider Environment & Infrastructure Solutions consultancy business.
