

Senior / Principal Consultant - Process Engineer

North West/Flexible

£-Attractive

I am working with a leading waste/environmental consultancy who has an exciting opportunity available for a Senior/Principal Process Engineer to join their team based in the North West. This Environmental team provide a wide range of consulting and engineering services to both the municipal and industrial markets covering all aspects of solid waste management and treatment. Their Process Engineering Team is looking to expand, increasing its skill base in the provision of waste and associated environmental management process design. In this position you will be undertaking the role of Subject Matter Expert (Waste Treatment) leading in provision of specialist technical direction and guidance and managing all aspects of process design/engineering packages. In order to be considered you must have; Extensive knowledge and experience in the treatment of municipal solid waste i.e. storage, recycling and treatment technologies especially energy recovery and conversion of waste to fuel; knowledge of the industrial sector is beneficial; Knowledge and experience of Thermal Treatment, Anaerobic digestion and Composting technologies and subsequent Environmental compliance systems; Experience in the development of technical solutions from concept selection, through design development, installation and commissioning; Familiarity in carrying out site investigation, problem identification and solution development; The ability to work and lead multi-disciplinary engineering teams, including managing the input of more junior process engineers; Effective input into business development and drafting of proposals; The ability to liaise directly with clients' personnel; Flexibility in being able to operate in other technical sectors is encouraged within the business, such as renewables, water and wastewater treatment; Qualified to degree level (or equivalent) minimum in process engineering (Chemical, Mechanical or Chemistry), with membership of an appropriate professional institution; Able to demonstrate excellent technical skills and have significant experience with a demonstrable track record in waste treatment works design and, possibly operations; Able to work effectively within multidisciplinary design teams and demonstrate effective leadership of process design, managing junior engineers and coordinating input from other disciplines; Business case preparation and delivery; Experienced in building and maintaining strong customer relationships and effectively contributing to proposal writing and business development initiatives; Capable of multidisciplinary submissions reviews and/or validation; Experience in one of, or several of, EfW, MBT, AD, IVC, MRF, OWC. This is an excellent opportunity to really make your mark within a fast expanding division.
