

Operations Manager

Nationwide

£-excellent

My client is a leader providing technical services & facilities management, energy efficiency and regeneration services and includes specialist energy related capabilities: smart buildings, green mobility, district & embedded energy and decentralised renewables. Due to business growth they have an exciting opportunity for an Operations Manager. The purpose of this role is to effectively, plan, manage and control frameworks and partnerships at a strategic level with various clients in the region, ensuring the best interest of the company at all times. Ensuring full compliance to company policies and procedures in regard to; Health and safety, programme, budgeted expense, quality, contract documentation, covering all activities from pre-commencement to completion with a dedicated team under your direction. The role is key to contributing to the overall management and development of the region within the senior structure. Client and framework management at all levels will be key along with building successful relationships, this will be pivotal in the role, managing client expectation, achieving success measures and driving improvement through your team's work. In order to be considered for this role you will have; Experience of Commercial Solar PV installations; Knowledge of Commercial Solar PV products; Strategic thinker; Management experience; Able to develop and write concise reportage to board; Track record of delivering results; Excellent understanding of CDM Regulations; Environmental awareness in line with current legislation; Industry accreditation / Qualifications; Relevant experience.
